Streamlining IT Procurement System

📌 PROJECT REQUIREMENTS ANALYSIS

Streamlining IT Procurement System

1. Purpose

The Project Requirements Analysis identifies what the system needs to do and what resources are required to develop the Streamlining IT Procurement System.

The system is designed to make IT purchasing faster, easier, transparent, and organized by managing requests, approvals, vendors, quotations, and purchase orders digitally.

2. Functional Requirements

The system should provide the following functions:

1. User Registration & Login

Users can securely log in.

Different users can have different access permissions.

2. IT Purchase Request

Employees can create purchase requests.

They can enter item name, quantity, specifications, and purpose.

3. Request Approval

Managers can view submitted requests.

They can approve or reject requests.

4. Vendor Management

Store vendor details.

Maintain vendor contact information and product details.

5. Quotation Management

Collect and compare quotations from different vendors.

Display price and product information for comparison.

6. Purchase Order

Generate purchase orders for approved purchases.

Maintain purchase-order details digitally.

7. Tracking

Users can track the status of their requests.
