Project title : Streamlining IT Procurement

💡 Ideation process

Ideation is the process of generating and exploring different ideas to solve the problems faced in the IT procurement process. The main aim is to make IT procurement faster, simpler, transparent, cost-effective, and well-organized.

🎯 Problem Identified

Traditional IT procurement often involves:

Manual request and approval processes

Delays in getting quotations

Difficulty in comparing vendors and prices

Lack of proper tracking of purchase requests

Communication gaps between employees, procurement teams, and vendors

Difficulty in maintaining procurement records

💭 Ideas Generated

1. Digital Procurement Request System

Employees can submit IT requirements such as laptops, monitors, software, and other equipment through an online system

⬇️

2. Automated Approval Workflow

Purchase requests can automatically move to the concerned manager or department for approval.

⬇️

3. Vendor & Price Comparison

The system can store vendor details and allow procurement staff to compare price, quality, delivery time, and warranty.

⬇️

4. Procurement Tracking Dashboard

Users can track the status of a request such as:

Requested → Under Review → Approved → Ordered → Delivered

⬇️

5. Centralized Database

All purchase requests, vendor information, quotations, approvals, and order details can be stored in one place.

⬇️

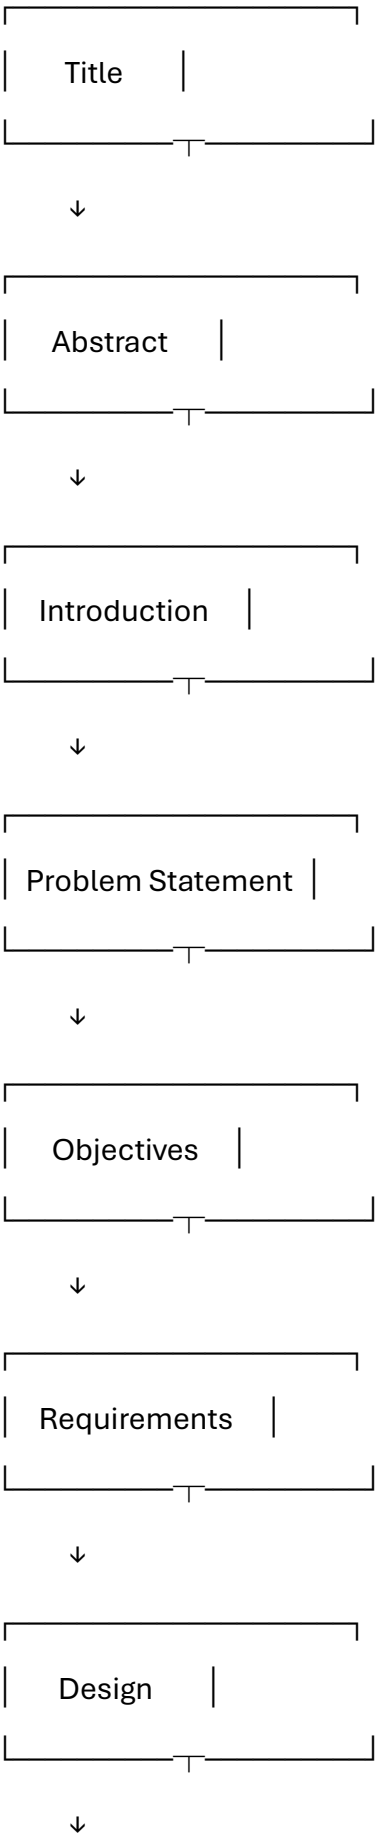

6. Notifications & Alerts

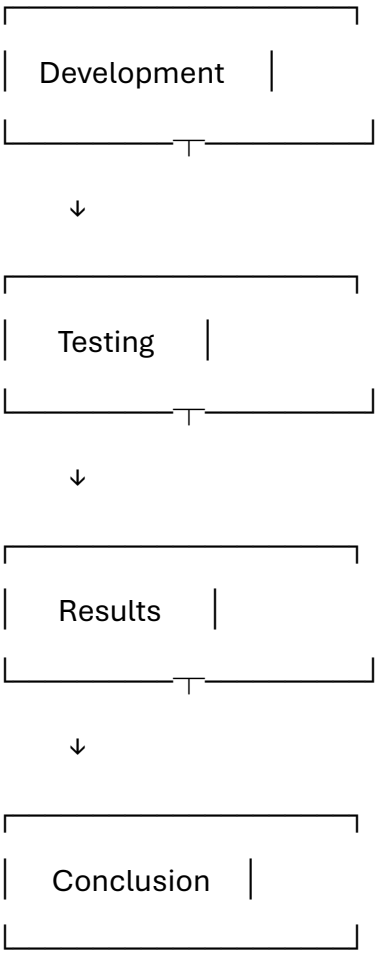

Automatic notifications can be provided when a request is approved, rejected, delayed, or delivered.

💡 Ideation – Smart IT Asset Management

The idea is to develop a Smart IT Asset Management System that helps an organization manage laptops, computers, monitors, software licenses, and other IT equipment in one place.

Design

🌟 Expected Outcome

The proposed ideas aim to create a single, organized IT procurement system that reduces manual work, improves transparency, makes vendor comparison easier, and helps organizations track every procurement request from request to delivery.
