Project Design Phase – Streamlining IT Procurement

The Project Design Phase explains how the proposed IT procurement system will be structured and how its different components will work together.

1. Problem–Solution Fit

Identifies the existing procurement problems and matches them with suitable solutions.

Problems → Solutions

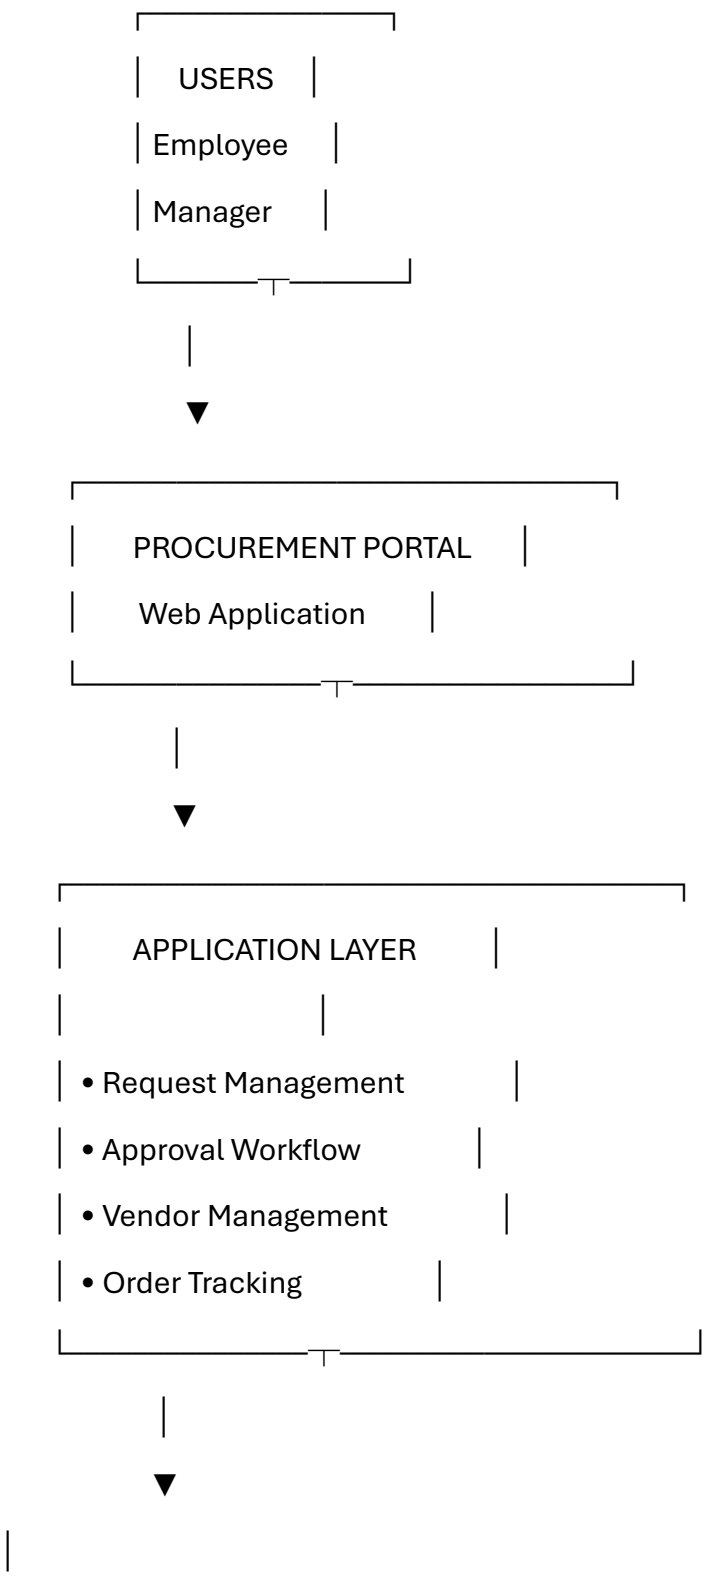

- Manual procurement process → Digital procurement system
- Delays in approval → Automated approval workflow
- Difficulty tracking requests → Real-time status tracking
- Duplicate or incorrect orders → Centralized procurement database
- Poor communication → Notifications and alerts
- Lack of transparency → Reports and dashboards

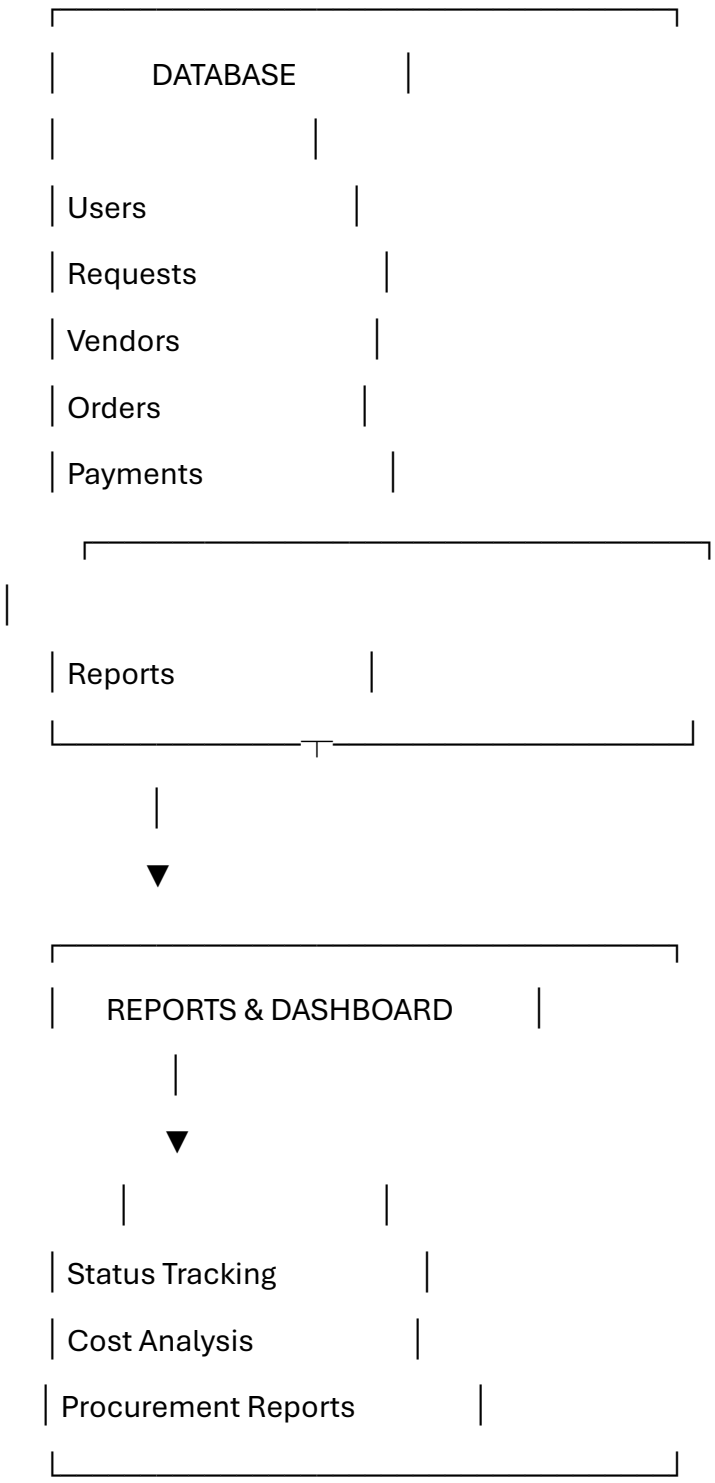

2. Proposed Solution

Develop a Streamlining IT Procurement System that manages the complete procurement process digitally.

User → Request → Verification → Approval → Vendor Selection → Purchase → Delivery → Tracking → Report

3.Solution Archietecture

🎯 Main Goal

To design a simple, transparent and automated IT procurement system that reduces manual work, saves time, improves approval processes, and makes procurement tracking easier.
